Conclusion/Brief comment:

This is a retrospective application to demolish both chimneys and parapet walls to the north and south gable elevations, and apply external insulating render system to the gable exteriors.

Policy GP8 expects proposals to achieve a high standard of design which respects and where possible enhances the character of the environment. GP13 supports development where there are no significant adverse effects on the amenities of neighbouring properties. Both policies provide for a high degree of personal choice on design matters in less sensitive areas (outside of Conservation Areas and not affecting the setting of protected buildings).

In this instance the works were fixing a water ingress problem with the chimneys and parapet wall. The property is not within a Conservation Area, nor is it a Protected Building, therefore, the applicants wish to alter the roofline of the property to prevent further damage to the building is considered a reasonable aspiration.

The scale and mass of the development will not impact on the character and appearance of the surrounding area, nor will it have any detrimental impacts on the neighbours amenity.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land and Planning (General Provisions) Ordinance 2007 have been taken into account in the assessment of this application.
