Conclusion/Brief comment:

This application is to demolish the existing rear extensions and erect a single storey and two storey extension, install a rooflight, solar panels and erect a retaining wall and external steps to the bottom of the garden, adjacent to the proposed extension.

Two storey flat roof extensions are not generally the best design solution, however, in this instance due to the topography of the land and the existing very high granite boundary walls, the two storey element would not be seen from any public vantage

points, and would not impose on either of the neighbouring properties as the first floor windows are not high enough to see over the boundary walls.

The proposals achieve a good standard of design, using materials which complement the existing materials. The extension will provide adequate levels of sunshine and daylight, and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the new extension, as mentioned above, is not considered to have a detrimental effect on the special character and appearance of the surrounding conservation area, nor will it have any impacts on either of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land and Planning (General Provisions) Ordinance 2007 have been taken into account in the assessment of this application.
