Conclusion/Brief comment:

This application is to erect a dormer window and install two small rooflights to the front roof slope and roof lights to the rear roof slope.

GP8 states that multi-level living is an effective and efficient use of land and should be supported. In this instance the first floor dormer window will be over 11m from the nearest neighbours boundary, so there are not thought to be any overlooking issues. It is the same with the rear rooflights, there is 12m to the rear boundary from the rooflights and so overlooking is not considered an issue in this direction either.

The first floor gable window in the west elevation looks over the neighbours land. However, due to the relationship of this area of land with the neighbour's dwelling, including the distance to the neighbour's dwelling, the potential overlooking of this

area of land is unlikely to have a significant adverse effect on the amenities of the neighbouring residents.

The proposals achieve a good standard of design, using materials which complement the existing materials. The dormer & rooflights will provide adequate levels of sunshine and daylight, and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the new proposals are not considered to have a detrimental effect on the character and amenity of the surrounding area, nor will it have any impacts on either of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land and Planning (General Provisions) Ordinance 2007 have been taken into account in the assessment of this application.
