Conclusion/Brief comment:

This application is to erect a garden room at first floor level above the existing outbuilding and a retaining wall to the southwest of the site.

At ground floor the outbuilding houses a double garage, which has been built against the steeply terraced western side of the site. The top of the garages is presently a flat roof with a timber retaining wall behind, with two higher levels beyond.

The new garden room will be constructed on the flat roof, with a new block retaining wall behind instead of the existing timber retaining wall. The two hedges behind at higher levels again will screen the extension completely from Icart Road. There will be no views from the other roads due to high granite walls and the topography of the land.

The proposals achieve a good standard of design, using materials which complement the existing materials. The extension will provide adequate levels of sunshine and daylight, and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the new extension is not considered to have a detrimental effect on the character and amenity of the surrounding conservation area, as it will nestle into the hillside, nor will it have any impact on any of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
