Conclusion/Brief comment:

This application is to demolish the existing roadside boundary wall and rebuild the wall with a central vehicular opening with pillars either side and either end, and railings on top of the low wall in between the pillars.

At present the roadside boundary wall is a granite faced low wall with the vehicular opening at the north end of the eastern boundary. The wall is not considered to be the original roadside boundary.

The style of the proposal is more suited to the age and style of the dwelling and it would retain a sufficient length of boundary wall and railings to provide enclosure to the street. The proposal would conserve the special quality, character and appearance of the surrounding Conservation Area.

The proposals are also considered to have no adverse effect on the special interest of the protected building and the setting of the other nearby protected buildings. The proposals are not considered to impact on any neighbour amenity.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposed height of the pillars has the potential to partially obstruct sightlines from the access. However, due to the nature of the access that it would serve (a single dwelling house) and the visibility of vehicles exiting the property along the highway, the proposal is unlikely to result in any significant road safety concerns.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
