Conclusion/Brief comment:

This application is to erect a single storey 6.9m x 15.3m link between the church and the church hall to the east of the site at the front of the buildings. The structure will include a covered area at the rear incorporating cycle parking.

The structure will be a timber frame with a mono pitch single ply roof and timber cladding and polycarbonate panels for the walls. There will be a main set of doors on the east front elevation and a rear set of doors to the covered area on the west elevation.

This is a relatively cost effective way to create a year round covered area, which can be used for a variety of different uses and functions. It is considered to be a much better solution than a marquee (as per application FULL/2024/1501 which was withdrawn), as it will perform better in inclement weather, will not make a lot of noise in the wind and is considered visually more appropriate.

The proposals are now considered to achieve a good standard of design, using materials which complement the existing materials. The extension will provide adequate levels of sunshine and daylight, and give the users more flexible and adaptable accommodation.

The scale and massing of the new extension is not considered to have a detrimental effect on the character and amenity of the surrounding area, nor will it have any impact on either of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
