Conclusion/Brief comment:

This application is to erect a dormer window on the northwest rear roof slope and install three roof lights, rather than one, on the southeast front roof slope.

The proposals would not prejudice the outcomes of the Local Planning Brief process and would not inhibit the implementation of an approved Local Planning Brief in regards to the Harbour Action Area, therefore the proposals are considered to comply with policy MC10.

Initially the rear dormer window appeared as a second floor extension as it came up off the ring beam and was the total width of the property. Although the dormer

cannot be seen from many public vantage points the scale of the proposal was not considered good design and the application was deferred.

The dormer window has been reduced in size so it does actually appear to be a dormer rather than an extension, and is now considered to be acceptable. The proposals are now considered to achieve a good standard of design, using materials which complement the existing materials. The extension will provide adequate levels of sunshine and daylight, and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the amended dormer is not considered to have a detrimental effect on the character and amenity of the surrounding conservation area, nor will it have any impact on either of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
