By letter dated 28th July 2025 stated the following:

"I have reviewed the proposed plans to erect a single storey extension to the west elevation at the above site. I have interrogated the States' Digimap system and records, which show that glasshouses were historically located on the land parcel.

It is not known whether any contaminated land surveys have been carried out historically as part of any previous development at the site, which would assess any risks posed by historical heated glasshouse use. Without knowing this, there is the potential for land contamination to be present and I have concerns that there could be contamination of metals, hydrocarbons and pesticides from this historic use. Other sources of contamination could also be present.

I would advise that the applicant is made aware of this potential risk, and I recommend that the following condition is attached to any granted permission:

- If, during any development, contamination not previously identified is found to be present at the site then no further development shall be carried out until the applicant has submitted to the Authority a method statement to identify, risk assess and address the unidentified contaminants, and obtained written agreement from the Authority for the works to continue. Any subsequent works shall be carried out only in accordance with the conclusions and recommendations contained in the agreed report.*

I would be grateful if these issues are considered during the determination of this application.

Conclusion/Brief comment:

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.

The application is acceptable in relation to the above policies and other material planning considerations.
