Conclusion/Brief comment:

This application is to replace three windows and a door with side lights on the west facing elevation of this protected building.

Initially the replacement windows were not considered to be of an appropriate style for a protected building, the application was deferred to enable the applicant to change the window design.

Due to the fact other fenestration on the rear elevation of the building already have uPVC windows, it has been agreed that in this case, as long as the style of the windows are appropriate, uPVC windows will be accepted.

Large scale drawings of the proposed windows and door have now been received and are considered to be appropriate and acceptable.

The proposals are now considered to achieve a good standard of design, using materials which complement some of the existing materials. The scale and massing of the proposals are not considered to have a detrimental effect on the character and amenity of the surrounding area, nor will they have any impact on the special interest of the protected building or any of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
