Conclusion/Brief comment:

This application is to erect a first floor extension to the rear south elevation to extend a bedroom and add a first floor bathroom.

There was a pre-application for this extension earlier in the year where the advice given was to reduce the length of the extension, have the east wall follow the line of the ground floor and to reduce the size of the south facing juliet balcony.

The latter two items of advice were actioned and although the length of the extension has not altered, the overall appearance of the first floor flat roof extension has been improved.

During a site visit the rear of the property was viewed from many vantage points to assess the impact of the proposed extension. In most cases the mass of the proposal would not be as prominent as initially thought, and from the rear elevation where it could feel prominent, the existing built environment is behind it, which helps to assimilate it into the background.

In this instance, the proposals are considered to achieve a good standard of design, using materials which complement the existing materials. The extension will provide adequate levels of sunshine and daylight, and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the new extension is not considered to have a detrimental effect on the character and amenity of the surrounding area, nor will it have any impact on either of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
