Conclusion/Brief comment:

This is a retrospective application to install replacement front and rear dormer windows and replace and resize a rooflight on the front roof slope.

The two dormer windows were to be repaired, but they were so rotten that they both had to be rebuilt entirely. The size and scale of the dormers has been replicated, but the flat roofs have now been given a shallow pitch to help with rainwater runoff. The actual windows will be replaced with uPVC units with the same fenestration as before.

The proposals are considered to achieve a good standard of design, using materials which complement the existing materials. The replaced dormers will provide adequate levels of sunshine and daylight, and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the proposals are not considered to have a detrimental effect on the character and amenity of the surrounding area, nor will they have any impact on any of the immediate neighbours.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
