Conclusion/Brief comment:

This application was originally to erect a first floor flat roof extension and install rooflights to the south/rear elevation and rooflights to the north front elevation.

The flat roof extension was not however considered an acceptable solution, the application was deferred for the agent to either reduce the size of the extension and/or consider a redesign. Amended drawings have since been received with a pitched roof first floor extension, which includes raising the existing ridgeline of the main dwelling by 1.2m and installing dormers in the front elevation.

The proposal is to create first floor accommodation by creating a first floor extension incorporating a Juliette balcony. The new pitched roof design fits in much better with the character of the surrounding built environment.

The proposals are now considered to achieve a good standard of design, using materials which complement the existing materials. The extension will provide adequate levels of sunshine and daylight and give the occupiers more flexible and adaptable accommodation.

The scale and massing of the new extension is not considered to have a detrimental effect on the character and amenity of the surrounding area, nor will it have any impact on either of the immediate neighbours, given the oblique views from the first floor Juliette balcony to the boundaries and the high level cills of the rooflights facing those boundaries.

Confirmation has been received that the development proposed has been designed to take into account matters of energy efficiency and current Building Regulations in accordance with Policy GP9.

The proposals are considered to conform to the above policies of the Island Development Plan and grant of permission is recommended, subject to conditions.

All material considerations as set out in the Land Planning and Development (Guernsey) Law, 2005 and the Land Planning and Development (General Provisions) Ordinance, 2007 have been taken into account in the assessment of this application.
